

# Do you have a myoelectric prosthesis?

## How easy do you find it to use?

We are looking for trans-radial users with a range of experiences to undertake a research study.

'Understanding the impact of skill, unpredictability and delays on the control of myoelectric prostheses'

This study aims to establish why some people find these devices difficult to control.

### WHAT YOU WOULD BE ASKED TO DO:

#### PART 1:

A series of simple tasks using your myoelectric prosthesis.

Time commitment—1 x 3-4 hour session

Location: **University of Strathclyde**

Alternative locations include: Salford, Manchester, Roehampton, Sheffield or Nottingham (please contact the researcher for details)

#### PART 2:

Assessment of everyday prosthesis use.

Time commitment—1 week

Location—Anywhere

(this involves wearing two wristwatch sized sensors during normal daily activity)
